

Exercise: Human Brain Project

In the context of the quest of building cognitive architectures (e.g. to be used in robots) that model how the human brain works, the Human Brain Project currently has a central role.

Read about this project, then try to answer the following questions!

Questions:

- 1.) What is the Human Brain Project?
- 2.) What are the goals of this project?
- 3.) How is the project structured?
- 4.) What are some first results that were produced in the context of the project?
Find some examples of project results and report them to your fellow students!
- 5.) What is the HBP Neurorobotics platform?
